Stone within a Stone Description

Combine stones in new ways in this virtual workshop with Ryan Gardner. Students will learn how to incorporate stones into one another by carving an opening into the larger stone to accommodate a smaller stone within it. Ryan will demonstrate how he fabricates and aligns the bezels so they can be soldered to the same back plate, creating a unique single element with both stones. This is a rare opportunity to elevate your stone-setting techniques and explore original combinations of materials under Ryan's expert guidance.

In this workshop, you will:
• Discover how to carve openings into stones to nest one stone inside another.
• Learn techniques to align and fabricate bezels for multi-stone settings.
• Master how to solder bezels onto a shared back plate, creating a seamless and unified design.
• Gain insight into Ryan's signature approach to designing one-of-a-kind, dimensional stone settings.
• Leave with a finished piece or the skills to take your stone-setting work to the next level!
