Crystalline glaze materials to get you started

If you want to mix your own glaze, this is a small group to begin with. If you pursue further work with crystalline glazes, you will need larger quantities.

Frit 3110 - around 10lbs

Zinc oxide - 3lbs

Silica - 3lbs

Spodumene- 1/2 lb

Talc 1/2 lb

Titanium dioxide 1/2 lb

Cobalt carb - 200grams max

Copper carb - 300grams

Manganese dioxide -300grams

Glue (wood or Elmers is fine) (a small bottle is great)

Alumina hydrate - just like 100grams

Sodium bisulfate powder 5lb bag (FOR ACID ETCHING, not required)

One- 5 gallon bucket (for acid etching)

Several small mixing buckets

Diamond sanding pads (diamond core tools)
